The Plain Truth about the 1921 Farm Seed Situation

Alfalfa, Clover, and Timothy

Alfalfa seed is, and probably will be, much lower in price this year than for the past year or two. The crop, as a whole, is larger than that of last year, and, due to this fact, very little Alfalfa seed is being imported. The quality of the seed in some of the important producing sections is below that of last year, but elsewhere it is equal to or above normal. The main thing to be sure of is that you obtain quality seed, dry-land-grown from the Northwest, and that you do not pay too much for this seed.

Clover seed reports continue to show a large production this year of Medium and Mammoth Clover, and information from certain sections points to the largest production of Red Clover seed in the last fifteen years. Less than one-tenth as much Clover will be imported this year as was shipped in last year. There should be no excuse for your not obtaining the finest possible quality and at an extremely reasonable price. Indications at this writing are that prices will be less than half those of a year ago. While the quality of Alsike Clover seed is equal to or somewhat above normal and last year, it is not so good as that of Red Clover. Prices for Alsike should rule slightly higher than medium this season.

Timothy seed is in good supply and the price is and will be much lower than last year or the year before. This is a most excellent reason for sowing Timothy freely. But in this year of plenty, purity and germination should be most carefully watched and made sure of before buying.

Seed Oats The Government Crop Report shows the enormous crop of 1,444,- 411,000 bushels. This is some 20,000,000 bushels higher than last year's crop, and several million bushels higher than any crop in the past five years. However, this big crop, owing to heavy rains at the time of harvest in many of the large Oat-producing sections, is, in many cases, one of poor quality. Seed dealers inform us that it has been very difficult to obtain good quality Oats heavy enough for feeding purposes. Fortunately, we are in a position to offer you our usual high quality of Heavyweight and Twentieth Century Oats at very low prices and will continue to do so as long as present stocks last.

Seed Barley Probably due to the decreasing demand for Barley for malting purposes, less acreage was planted. At any rate, we have a Barley crop below the five-year average but higher than last year's crop. Due to rains, it is going to be difficult to furnish seed Barley as bright as we have sold some years, though the price will undoubtedly be lower, along with the other grains.

Spring Wheat again made good crops in the East and New England States when sown early and given a fair chance. We have no reason to believe but that our Marquis Wheat will continue to give yields of 20 to 40 bushels per acre under favorable conditions in the eastern states.

Seed Corn The Corn crop this year is nearly three and a quarter billion bushels. Not only is this the largest crop ever raised, but when you consider that we raise 70 per cent of the world's Corn, and that the Old World countries also have a good Corn crop, it is evident that good seed Corn should sell relatively cheap. But be sure of the moisture content and germination in the seed Corn you purchase.

The Potato is "King" this Year The crop as last reported was 421,252,000 bushels. The unfortunate thing about this big crop is that in many of the formerly considered best growing sections, late blight and the resulting soft rot have developed. We have been more careful than usual in selecting and storing only stocks of true type as to variety and absolutely clean as to disease. You will have no difficulty in obtaining this high-grade seed at a reasonable price if you will only buy before our present choice stocks are exhausted and we have to replenish from the open market.

Per 31K 31K $0 31M 35 Wisconsin recleaning, the to raised the from our private dle buying magnitude Rate station, agent. the Philadelphia New York Boston seeds, that sell. Our The The Carload seeds, that famous like, general years old, that is farm, or that is seedgrower to it. It is worth something—is it not?—to obtain your farm seeds direct from headquarters, from farmers who know them and grow them.

The personnel of our corporation is as follows: Edward F. Dibble, the President, fifty-four years old, a farmer and seedgrower from childhood, has charge of the buying and selling and general office work. Harwood Martin, Treasurer, twenty-eight years old, Cornell (B.S.), living on the farm where he was born, superintends the warehouses and is responsible for the reconditioning, handling, packing, and shipping of all the seeds that go through our plant. H. E. Dibble, Secretary, son of Edward F., thirty-one years old, graduate of Cornell (B.S.), and of Wisconsin (M.S.), where he spent five years specializing in plant-breeding, seed-testing, and the like, is our Seed Analyst in charge of our seed laboratory, and his work is most important in that he has to see to it that all seeds that we ship to our customers are of the highest grade obtainable.

The Dibble and Martin Seed Farms contain over 1,000 acres of the choicest land in the famous Genesee Valley country, and on these farms we grow a large portion of the seeds we sell. It is fair to our customers to state, however, that our trade has now reached such a magnitude that we annually use the products of over 10,000 acres, supplementing the crops raised on our own seed farms by the purchase of seeds direct from the growers as far as possible, buying in all cases just one grade, and that always the best money will buy.

Honeoye Falls is a small town of 1,500 inhabitants, 13 miles south of Rochester, 70 miles from Buffalo, in the center of one of the best farm-seed growing sections in America.

Our location and shipping facilities are of the best, and freight rates to points in the middle and eastern states are low. Look at the map in this catalog and see how near we are to you.

Our frostproof warehouses, elevator, and seedhouses, 400 feet in length, are on three private switches on the New York Central and Lehigh Valley Railroads.

Carload rates to principal points are as follows (L. C. L. slightly higher):

Prices are f. o. b. shipping station. Barrels and sacks are free, as stated.

Terms strictly cash with order, except on carload lots, upon which we will make you a special price delivered at your station. If customers order goods shipped to a prepaid station, or to a station at which there is no agent, cash must accompany the order to prepay the freight; otherwise, we will ship to the nearest railroad station at which there is a regular agent. We do not ship seeds C. O. D.

As to guarantee. After the experience of a quarter of a century as farmers and seedsmen, we have evolved a guarantee clause of our own for different kinds of farm seeds that provides an absolutely "guaranteed" to each and every purchaser, and we hereby give notice that Dibble’s Seed Potatoes, Corn, Oats, Wheat, Barley, Alfalfa, Clover, and Timothy seeds are sold subject to the guarantee as printed on the respective pages describing our different seeds, and prospective customers are requested to read the liberal terms of our guarantee before ordering.

Copyright, 1921, by Edward F. Dibble Seedgrower
Testing Seeds as Dibble Tests Them

means testing seeds as they are tested by the Seed-testing Department, Bureau of Plant Industry of the United States Department of Agriculture, Washington, D. C. Our new seed-testing laboratory is equipped with the most modern and up-to-date apparatus known to modern science, and we are under obligations to Prof. E. R. Brown, Botanist of the United States Seed-testing Bureau, for his aid, kindly interest and instructions that have enabled us to equip our own private laboratory with the same kind of apparatus that is used by the Government at Washington. Our Mr. H. E. Dibble, a graduate Seed Analyst of several years' experience, has charge of the work and as there is really nothing mysterious about it, we are going to tell you just how it is done, what the different pieces of apparatus are for and how they are used.

The large picture shows a general view of our laboratory and equipment. The room is finished in laboratory white with ample window space from the south and east. It is heated by natural gas and a thermostat controls the temperature of the room; this works by electricity and is positively automatic. If we wish to keep an even temperature of 70°, there is a thermometer on the wall that can be set by an indicator for any desired temperature; set at 70°, the thermostat turns the gas off if the temperature of the room gets above 70°, and turns it on if it falls below.

At the right stands the moisture-tester, a piece of apparatus that is more than human in its intelligence to give us the exact moisture-content in a given lot of seed corn for instance. This is most important, as experience has proved that corn carrying 16 per cent moisture or over is liable upon the arrival of warm weather to heat, mould and to a certain extent spoil, becoming valueless for seed purposes. In operation, a given amount of corn and a certain oil are mixed in a retort, afterward heated by gas to 195° C.; this drives the water out of the grain in the form of steam which afterward is condensed and accurately measured and figured in direct percentage by a graduate glass showing 12-15-18-20, etc., per cent moisture-content, as the case may be.

We make tests of all lots of corn that come to our Seed House and none is accepted that does not come up to our requirements, and you may rest assured that the bags of seed corn you may receive on your order have been tested according to this method.

Next to the moisture-tester, in the corner, is the gas germinator, a type originated and designed by the seed experts of the United States Department of Agriculture and made for them by a New York City firm. We feel
honored to be allowed to have one of these made after the Government model. This germinator is made of heavy copper, water-jacketed, heated by natural gas through a Bunsen burner.

We also have a large electric germinator that does not show in the picture, and the operation of the two germinators is very similar. The germinating chambers are air-tight, and the temperature is controlled by thermostats. The germinators can be automatically regulated to give the desired temperature for the best results for the different classes of seeds.

Some seeds, such as Alfalfa Clover, Timothy, Oats and Barley require a cool seed-bed at about 70° F., while Corn gives best results if a uniform temperature of 80° to 90° F. can be had. It is of the utmost importance that tests either for germination or purity be made by someone personally interested, and so far as we know, our house is the only one specializing in Farm Seeds where all of the tests are made by a member of the firm, who is vitally interested in the absolute accuracy of each and every test made.

**Testing for Purity**

Every lot of seed is sampled, and from that sample germination tests are made, and whether the bags of seed you get at the station contain any or all of the above-mentioned seeds, isn’t it worth something to you to know that the seeds you are taking home with you are dry, that is they will keep, that they will grow, and also that they have been tested for purity for at the table in front of the window where the seed analyst is working, the purity tests are made.

First, the sample to be tested is weighed on balances, as shown in the glass case. These balances are most accurate, being sensitive to one-tenth of a milligram. Foreign seeds, inert matter which consists of broken seeds, dirt, etc., are separated from the sample, the work being done under the microscope, and the impure seed and inert matter are then carefully weighed on this same balance and the weight subtracted from the original weight of the seed before analysis, by which process the percentage of pure seed is determined.

Samples of all the common and most of the uncommon weed seeds (ninety-six in all) as shown in the four glass plaques leaning against the window-sill are kept constantly before the analyst for comparison and identification.

Now you know how we know that Dibble’s Tested Seeds are the best money can buy, and we hope you have decided they are the kind you are going to use hereafter on your farm.

In seeds, “the best is the cheapest,” and every good farmer should use tested seeds on his farm. Good seeds of high germination and purity pay.
As to Our Responsibility

Thousands of farmers will see this catalog for the first time, and as we consider it absolutely necessary for farmers to know that firms with whom they are dealing at a distance are thoroughly reliable, we print below facsimile letters from our bankers with whom we have been doing business for over a quarter of a century.

Bank of Lima
Lima, N. Y.

To whom it may concern:—

All the members of the corporation — Edward F. Dibble Seedgrower, were born and brought up in this Township and are among our best and most respected citizens. Their Seed Farms which they own and control, aggregating nearly 2,000 acres, are among the best in this town and are conducted in a most successful and prosperous manner.

Edward F. Dibble, the President, is the largest stockholder in this Bank, and its Vice-President.

Bank of Honeoye Falls.
A.M. Holden, Banker
Honeoye Falls, N.Y.

To whom it may concern;

I have known intimately the members of the corporation, Edward F. Dibble, Seedgrower, ever since their early childhood, and they are men of the highest standing and of the strictest integrity.

From an experience of a quarter of a century doing business with them at our Bank, I am convinced that they will fulfill all obligations they enter into with every customer, to the letter.

They are the largest land owners in this section and their Seed Farms are in the highest state of cultivation.

From a small beginning, the Dibble Farm Seed business has grown to enormous proportions, one of the largest, if not the largest of the kind in America.

Yours truly,
Bank of Honeoye Falls,
A.M. Holden

We also refer to Dun's and Bradstreet's Commercial Agencies, the leading agricultural papers of the East, and the many thousands of our customers.
Grow Bigger Crops
Inoculate your Seed with Edwards' Legume Bacteria

The chief value of legumes such as alfalfa, clover, peas, beans, etc., for use either as food or as green manure, lies in their high content of nitrogen. With the aid of certain kinds of bacteria, the legumes can get their supply of nitrogen from the air. These bacteria live and grow in the soil, and as the new plants start to grow, the bacteria burrow into the roots, grow there, and produce nodules or tubercles, visible to the eye as little bunches on the smaller roots. During this process the bacteria take nitrogen from the air and give it to the plants. Unless the plants have these legume bacteria growing on their roots, they will not make a successful growth.

On land where it is hard to get a good catch of legumes, or on which a new crop is to be sown, the right kind of bacteria must be supplied by inoculation. One method that has been recommended in times past is to spread over the field to be seeded soil from a field that has grown the same crop. This method is cumbersome and expensive, and is apt to introduce into the soil seeds of bad weeds, fungus, or bacterial plant diseases; hence it is not a desirable method.

Seed Inoculation Simple

The best method of inoculation is to treat the seed before it is sown with a pure culture of the right kind of bacteria for that particular crop. By this method the inoculation can be done in a few minutes' time, and the bacteria are carried into the soil with the seed in ample numbers to insure inoculation of the roots, with consequent increased growth of the crop, and with no risk of introducing seeds of bad weeds or germs of plant or animal diseases.

Crops for which Cultures are Made

Cultures are made for legume crops as follows: Alfalfa, Sweet Clover, Red Clover, Alsike Clover, Crimson Clover, White Dutch Clover, Soja Beans, Vetches, Peas, etc. Of this list, the same cultures can be used for either Alfalfa or Sweet Clover and likewise the same cultures can be used for Red, Alsike, Crimson, and Dutch Clovers.

When ordering, be sure and state upon what crop you wish to use the Culture.

THE COST. Edwards' Legume Bacteria cultures are made in two sizes, one to inoculate 30 and one to inoculate 60 pounds of seed. Postage paid.

To inoculate 30 pounds of seed .......... $0.60
To inoculate 60 pounds of seed .......... 1.20

These prices mean a very low cost per acre, the exact amount depending on the amount of seed sown.
Dibble's Northern-Grown Alfalfa Seed
1919 CROP

EVERY BAG TESTED BY UNITED STATES GOVERNMENT METHODS AND TAGGED, SHOWING OUR PURITY AND GERMINATION TESTS

D. B. Alfalfa, 99.50 per cent pure or better; the best obtainable. Average analysis of all the D. B. Brand Alfalfa Seed sold last year was above 99.70 per cent purity and dodder-free.

Dibble's Alfalfa Seed, grown in the cold North, is absolutely hardy and produces perfect and permanent seedings when seed from other sources fails. If you are contemplating growing Alfalfa, our new Alfalfa book tells you just how to grow it, and we can furnish you the same variety we have found successful on our own farms. A field well set to Alfalfa will last from ten to twenty years. We have over 100 acres on our own Seed Farms and find it very profitable.

Alfalfa is acknowledged to be the most wonderful and productive plant of the clover family. It will grow on any good corn or wheat land, or on any soil that will give a good catch of clover. Once established, it is very hardy, sinking its roots deeply after moisture and nourishment, and the severest drought or coldest weather will not kill it.

Grows about 3 to 4 feet high, can be cut three or four times each season, and produces an average of four to five tons of hay to the acre. The analysis shows one ton of well-cured Alfalfa to be worth practically the same as a ton of wheat-bran. Combined with corn fodder or ensilage, it makes an ideal feed for milch cows or steers.

Buy Alfalfa Seed from Alfalfa-Growers

The New York Agricultural Experiment Station, at Geneva, uses D. B. Alfalfa Seed on the Station Farm and for extension work among the farmers. Cornell University uses our D. B. Brand Seed on the College Farms, and scores of farmers writing us pronounce our D. B. Alfalfa the best they ever saw. Recently we sold 200 bushels (12,000 pounds) to the New Jersey Alfalfa Association. Every lot is tested in our own seed-testing laboratory by our Mr. H. E. Dibble, a graduate Seed Analyst of experience, or under his direction. We sell Alfalfa subject to your test, the test of your State Experiment Station, or that of the United States Department of Agriculture. Keep your seed ten days, and if you are not convinced that it is as good as we say, return it at once; we will refund your money and pay the freight both ways.

We use all reasonable care in packing and sending out our Alfalfa Seed; but, as so many circumstances may arise after it leaves our possession over which we have no control, we therefore do not guarantee, nor will we be responsible for, the crop grown from any of our seeds.

D. B. Alfalfa seed purchased of you this year was perfect as to germination and entirely free from weed seeds. We obtained a very even stand and were pleased with our field of Alfalfa.—HOWARD F. BRUNGE, Tunkhannock, Pa.
Dibble’s Seed Farms
Headquarters for Alfalfa Seed

Every bushel is northern-grown, hardy, acclimated, and the only kind to use on northern farms to insure success, the kind we used on our own farms to produce what has been called by farm experts “the best 100 acres of Alfalfa this side of the Rocky Mountains.”

Alfalfa seed, while higher than the clovers, is much cheaper than last year. Sow it freely. A good stand of Alfalfa on a field will more than double its value. What D. B. Alfalfa seed has done for others, it will do for you.

Your Alfalfa has been tested against the Grimm and found to be much better. Your clover and grass seeds have always been clean and pure and of the best quality. Your prices are usually lower than those of most seed houses, while the quality of the seed always averages much better.—EDWARD R. HEWITT, Midvale, N. J.

We have a fine seeding from your Alfalfa seed. I think every seed grew. I shall want more next spring.—DEXTER BOWMAN, Jordanville, N. Y.

The Alfalfa seed I bought of you last spring gave entire satisfaction. Our county Bureau man, DeLacy, said it was the best he ever saw.—Wm. SHEELEY, Millbrook, N. Y.

I am very much pleased with the seeding from your dry-land Alfalfa seed.—MURDOCK BROS., Crown Point, N. Y.

The D. B. Brand Alfalfa seed proved very satisfactory. I sowed 3½ acres the 9th of August; it came up fine and is now almost knee-high all over the field.—C. DEATERLY, Fayette City, Pa.

We never had a more satisfactory looking seeding before than we have where we sowed your northern-grown dry-land Alfalfa seed.—JOHN C. BOWE, Elbridge, N. Y.

The Alfalfa was benefited by the culture. I sowed this field one year ago to Alfalfa, without using inoculation, and it was a failure.—WEIR W. KELPER, Steuben, Ind.

Send me sample and price on your Alfalfa seed; shall need 800 pounds. Had good success with the seed I bought of you last season; cut over 100 tons from 25 acres.—WALTER STOOTS, Westwood, N. J.

The Alfalfa seed purchased from you was pronounced by the Experiment Station as practically free from weeds, germination good, and I have a first-class seeding from it.—S. PERCY HOOKER, Le Roy, N. Y.

I sowed Alfalfa seed treated with Alfalfa culture on the 20th of July and it has made a fine growth, nice even stand, and the roots are plentifully supplied with nodules. I believe the cultures will do all that is claimed for them.—J. D. FLINCHAUGH, Red Lion, Pa.

The Alfalfa and clover seed was good, the germination was splendid, and I have a good stand. I saved from $2 to $3 per bushel by buying seed from you.—CHAS. W. FISHER, Vergennes, Vt.

I am well pleased with that northern-grown dry-land Alfalfa seed I sowed July 28. There is a good stand all over and in some places over a foot high.—F. EBERHARDT, Cassville, N. Y., Oct. 25.

I am very much pleased with the Alfalfa seed bought of you; it germinated well, and from a sowing July 25, I have Alfalfa in blossom.—J. PALMER HART, Red Hook, N. Y., Oct. 8.
D. B. Brand Timothy and Clover Seed

"THE CREAM OF THE CROP"

We sell, annually, over $200,000 worth of Clover and Grass Seeds to granges, farmers' clubs, and individual customers and have received scores of letters from them in which they say that "we not only had the best seeds we ever had on the farm, but we also saved from 50 cts. to $7.50 per bushel by buying D. B. Brand Seeds."

Notwithstanding the fact that our seeds are tested in our own laboratory, we sell our D. B. Brand Seeds subject to your test, the test of your State Experiment Station, or that of the United States Department of Agriculture.

Keep your seed ten days after arrival, test it as you wish, and if you are not convinced that it is as good as we say it is, return it at once; we will refund your money and pay the freight both ways.

We use reasonable care in packing and sending out our Clover and Timothy Seed, but, as so many circumstances may arise, after they leave our possession, over which we have no control, we therefore do not guarantee, nor will be responsible for the crop grown from any of our seeds. Samples free.

The sample of Timothy Alsike mixture purchased of you turned out 100 per cent pure. We saved a lot of money by using this mixture and have a better stand than any on adjoining farms.—F. G. Vinkler, Unadilla, N. Y., Nov. 9, 1920.

I have a better stand than the average around here from the Alsike and Red Clover and I saved over $2 per bushel buying of you rather than locally.—H. E. Hayes, Windber, Pa., Nov. 5, 1920.

As a result of using Timothy-Alsike Mixture, saved quite a little money over buying locally and obtained a very excellent stand.—Hugh T. James, Montrose, Pa., Nov. 8, 1920.

We purchased some D. B. Medium and D. B. Timothy of you last spring and saved money by doing so and at the same time obtained a much better seeding than any of our neighbors.—H. L. Pruysman, Troupsburg, N. Y., Nov. 8, 1920.

We saved about $80 by using Timothy-Alsike Mixture instead of using separate seeds and mixing them ourselves.—Henry Reeves, Leesburg, N. J., Nov. 8, 1920.

We saved $2 per bushel on the Clover and Timothy we purchased of you last spring and obtained 100 per cent seeding which is much better than any others we have examined in our community.—Charles L. Ring, Van Etten, N. Y., Nov. 9, 1920.

The Clover and Grass seed came up good and clear of weeds; the price was $3 to $4 cheaper per bushel—that is why I sent to you.—Ezra L. Lahman, Christiana, Pa., Oct. 24.

All the seed I purchased of you was perfectly satisfactory and the price was much below that of the local dealers.—R. E. Barnes, Sayre, Pa., Oct. 29.

The seed was O. K. in every way. I saved $7.50 per bushel on Alsike and $1.50 per bushel on Timothy by buying from you.—William Wheelock, Warren, Pa., Oct. 22.

The germination of your Clover seed was good and it was free from weeds. The seed was $2 to $3 less per bushel. My 40 acres of seeding is fine.—S. G. Strasenburgh, Morton, N. Y., Oct. 24.
D. B. Brand Clover and Grass Seed

99.50 PER CENT PURE, OR BETTER. THE BEST POSSIBLE QUALITY. EVERY BAG TESTED BY UNITED STATES GOVERNMENT METHODS AND TAGGED, SHOWING OUR PURITY AND GERMINATION TESTS.

We continue our well-known policy of handling just one grade of Seeds, and that the best money will buy; nothing else goes into our warehouses and nothing but the best can therefore go out to our customers.

Traveling men from the big recleaning plants of Chicago, Toledo and other western cities, tell us that we are the only firm demanding 99.50 per cent purity or better on all purchases.

The average analysis of D. B. Brand Clover and Grass Seeds that were analyzed the last few years at the New York Experiment Station, the different New England Stations and the Seed-testing Bureau at Washington was above 99.70 per cent purity. Part of the samples were drawn by the official Inspectors, a few were sent direct by ourselves to prove our own tests, and over half of them were made for our customers from seed we had shipped them.

New York State uses D. B. Timothy and Clover on Cornell University Farms, and Cornell professors use D. B. Seeds on their own farms.

Over a score of the great New York State Institutional Farms use Dibble's Seeds annually.

Special price-list issued weekly during the season

RED MEDIUM CLOVER. The common Red Clover largely grown throughout the country.

MAMMOTH SAPLING CLOVER. Compared with the common Red Clover, its flower, foliage, and stems are of darker color, and it is later and of larger growth.

ALSIKE. The hardiest of all Clovers; perennial. On rich, moist soils it yields enormous crops. Its greatest value is for sowing with other Clovers and Grasses.

TIMOTHY. This is the most valuable of all the Grasses for hay, especially in the North.

Full stocks, choicest grade only, of Orchard Grass, Kentucky Blue Grass, Red-Top, Dwarf Essex Rape, Canada Field Peas, Winter Vetch, etc., constantly on hand.

Read, on opposite page, the testimonials from a few of our thousands of satisfied Clover and Grass seed customers.
Dibble's Twentieth Century Oats

Are early, extremely productive, with tall, stiff straw bearing long heads filled with good-weight, thin-hulled grain, weighing from 36 to 38 lbs. per measured bushel. These Oats originally came to us from northern Canada, being discovered by one of our men we had out looking for new varieties of grain. After growing them on our farms for a year or two, with good results, we introduced them to our trade, and they have given general satisfaction.

On our own farms, growing from 100 to 150 acres annually, they have given us an average yield of over 60 bushels per acre for some eight or ten years, which is over twice the average production of the United States for the same period. Several crops, on large fields have yielded over 80 bushels per acre, and a neighbor, from a four-acre field, threshed and delivered to our warehouse 440 bushels of recleaned grain. Hundreds of our customers have written us glowing letters in regard to the superior qualities of Twentieth Century Oats, and they seem to be fully as productive and desirable in every way as when first introduced.

If your own Oats are light-weight, badly stained or run out, you cannot afford to sow them when you can get Dibble's bright, clean, heavy Seed Oats for so little money. Every bag is tagged, showing our purity and germination tests. Samples free.

Dibble's Seed Oats are recleaned by the best mills known, and you will find our Oats a choice sample for seed purposes. We sell them to you subject to the following guarantee: We guarantee our Seed Oats thoroughly recleaned and screened by the best mills known to the trade, and in first-class condition for sowing. Keep our seed grain ten days, test it, and if not entirely satisfied in every way, return it to us at once and get your money back.

We use reasonable care in packing and sending out our Seed Oats; but, as so many circumstances may arise after they leave our possession, over which we have no control, we, therefore, do not guarantee, nor will we be responsible for, the crop grown from any of our seeds.

For prices, see special price-list.

Our own stock, while several thousand bushels, is extremely limited, and when sold out, we will not be able to procure more of the same high quality. We suggest that you order early as late-ordering customers will undoubtedly be disappointed.

Use Dibble’s Tested Seed Oats and grow better crops than you ever grew before. During the last year, over fifty of our customers have written us that Dibble’s Seed Oats outyielded their own home-grown seed, in many cases over 2 to 1.

It is a well-known fact that seeds of all kinds grown in the North are harder, more vigorous and more productive than those of southern origin. This is especially true of Oats and Barley, which are plants of northern origin, and owing to their hardiness, are grown largely in extreme northern latitudes. If you have been using home-grown seeds with unprofitable or just ordinary crops, try Dibble’s northern-grown Seed Oats this year and your Oat crop should be a money-maker.

Remember Dibble’s Seed Oats are screened and recleaned twice in our own warehouses.

The stand of Twentieth Century Oats resulting from seed purchased of you last spring was practically 100 per cent perfect and was better than any variety of Oats we have grown heretofore.—Pratt Boice, Kingston, N. Y., Nov. 9, 1920.

An ideal Oat crop
Dibble's Twentieth Century Oats

Have had a direct sale to farmers, through our catalogue, of over 300,000 bushels since we introduced them a dozen years ago, and they seem to be as popular and productive as ever.

The Twentieth Century Oats yielded 65 bushels to the acre, free from smut—about twice the yield of my neighbors.—ELMER G. DAVIS, Stone Ridge, N. Y., Oct. 25.

Finest Oats I Ever Raised

The seed I purchased of you last spring gave excellent results. The Twentieth Century Oats are the finest I ever raised, weighing 38 pounds per measured bushel.—C. C. WOODRUFF, Litchfield Co., Conn.

Large Yield; Heavy Grain

The Oats that I purchased from you last season gave 70 measured bushels to the acre, very heavy grain, weighing 38 pounds per bushel.—A. YEO-MANS, Wayne Co., N. Y.

The Twentieth Century Oats did well and outyielded my other Oats 20 bushels per acre, stood up well, and were free from smut.—D. R. BAILEY, Wyaland, Pa.,

Free from Smut

The Twentieth Century Oats were free from smut and yielded double the quantity of home-raised seed of common variety.—ALFRED E. NOKES, Ellenberg Center, N. Y.

Your Oats made two bushels to one of our own seed.—J. HARRY REAMER, Chambersburg, Pa.

The Twentieth Century Oats grew about 4 feet tall, very even, with big heads and did not lodge.—CLIFFORD WILLISTON, Hampden Co., Mass.

The Oats yielded by weight nearly 80 bushels per acre. Was well pleased with the seed.—WM. E. HENDERBERG, Rome, N. Y.

The Oats sowed last spring yielded 60 bushels per acre and weighed 34 pounds per measured bushel—not a big yield, but from 10 to 15 bushels better than common Oats grown around here. They did not blight and they stood up well.—H. E. TENNY, Hilton, N. Y.

They were the best Oats I ever had—free from smut, with good, stiff straw.—WM. H. BRESSLER, Spring Mills, Pa.,

Outyielded Others

The Twentieth Century Oats were fine; they yielded just two bushels where other Oats yielded one in the same field.—C. A. BOYD, Saegerstown, Pa.

440 Bushels from 4 Acres

From four acres of land we threshed this season 440 bushels of Oats, thresher's measure.—LEVI SIMONS, Livingston Co., N. Y.

Customer Much Pleased

In regard to the Twentieth Century Oats, we are pleased to say that they yielded 55 bushels to the acre, by weight. On a large field of about 16 acres, our own Clydesdale variety yielded 27 bushels to the acre, and the yield of Clydesdale Oats on our best Clydesdale field comparable to the yield of the Twentieth Century was 43 3/5 bushels to the acre. We are very much pleased with the Twentieth Century Oats, and expect to plant largely of them next year.—EDWARD R. MINNS, New York State College of Agriculture, Cornell University, Ithaca, N. Y.
Dibble's Heavyweight Oats
THE HEAVIEST OATS GROWN

The average weight of the several thousand bushels of Heavyweight Oats we have in store is from 41 to 43 pounds per measured bushel. The grain is thin-hulled and of splendid color. The straw is tall, strong, and stiff, and, so far, this variety has proved free from smut or other disease.

Dibble's Heavyweight is, in our opinion, the most productive Oats grown, and yields of 80, 82, 87, 90, 92, and up to 118 bushels per acre have been reported to us by our customers as having been grown from our seed. Two large fields from which we have shipped seed averaged over 100 bushels per acre.

In our experience of over a quarter of a century, we have never seen any other variety that compared with the Heavyweight, and we have never had bushels enough to go around any season since we introduced it several years ago. The Heavyweight is not only the heaviest Oat grown in America but our customers report it the most productive. Read all the testimonial letters on the opposite page. Order early. Samples free.

Dibble's Heavyweight Oats is sold subject to the following guarantee:

We guarantee our Seed Oats thoroughly recleaned by the best mills known to the trade, and in first-class condition for sowing. Keep our Seed Oats ten days, test it, and if not entirely satisfactory in every way, return it at once and get your money back.

We use all reasonable care in packing and sending out our Seed Oats, but as so many circumstances may arise after it leaves our possession, over which we have no control, we do not guarantee, nor will we be responsible for, the crop grown from any of our seeds.

Owing to the extra-heavy weight of these Oats, not less than 3 bushels should be sown per acre.

For prices, see special price-list.
Dibble’s Heavyweight Oats

Have made wonderful yields for a large number of our customers in many states. We read of remarkable records and big yields of Oats in the western states, under irrigation, but right here, in the East, Dibble’s Heavyweight Oats have produced record-breaking crops. Here’s the evidence.

Your Heavyweight Oats outyielded our own seed three to one this year and were the very best we ever grew.—Emil Seibert, Spencerport, N. Y., Nov. 10, 1920.

The Heavyweight Oats had fine germination, gave us a good stand, did not lodge, and yielded better than any other kind of Oats grown on adjoining farms.—R. C. Molineux, Camden, N. Y., Nov. 11, 1920.

The Heavyweight Oats germinated 100 per cent and were 50 per cent better than any other kind of Oats on nearby farms.—J. S. Hathorn, Geneva, N. Y., Nov. 9, 1920.

The Heavyweight Oats purchased of you yielded 10 to 15 bushels more per acre than any other variety on my own or adjoining farms.—C. L. Swope, Freeville, N. Y., Nov. 8, 1920.

The Heavyweight Oats we received from you this spring germinated 100 per cent and the quality of the seed was nearly perfect and they did not lodge.—A. S. Stauffer, Sugar Grove, Pa., Nov. 11, 1920.

Heavyweight Oats raised from your seed were the best we ever had. They did not lodge, and they were very much superior in yield to any Oats we ever raised.—William M. O’Neill, Pleasant Mount, Pa., Nov. 9, 1920.

We had 700 bushels Oats from 7 ½ acres and have a fine stand of Alfalfa from your seed sown on the same field.—Reuben McDonald, Jamesburg, N. J.

The seed Oats were very satisfactory considering the season, yielding a good crop weighing 40 pounds to the bushel.—W. C. Nash, Mt. Kisco, N. Y., Oct. 9.

The Heavyweight Oats gave a fine crop of good heavy Oats and were best crop in this section.—N. B. Scott, Blossvale, N. Y., Oct. 15.

From the Heavyweight Oats I had from you, I harvested from three-fourths of an acre, 70 bushels by measure of 40-pound Oats; straw 4 feet high.—Thos. W. Rogers, Rutland Co., Vt. [This would be equal to over 117 bushels an acre.]

The Heavyweight Oats yielded just twice the amount of other kinds.—Irvin Farber, Stark Co., Ohio.
Dibble's Spring Wheat
Made money for nearly every farmer who grew it last year, so far as we know. We sold thousands of bushels and started hundreds of eastern farmers making money growing Wheat for market, as well as for their own flour. We know of over fifty crops that have been reported to us in the Middle and New England States that produced a yield of from 20 to over 30 bushels per acre (an average of 27 bushels), and in several instances outyielding Winter Wheat on the same farm.

There are as many varieties of Spring Wheat as there are of Winter Wheat, and many of them are absolutely worthless for eastern farmers. The seed Wheat experts of the United States Food Administration furnished us with Marquis Spring Wheat from the Northwest, a certain variety especially adapted to eastern farms, and we have a splendid stock of this same type for this spring's trade.

There is one main essential in growing Spring Wheat successfully here in the East: Sow the right variety, using northwestern-grown stock, and it is absolutely necessary for best results to get new seed every year. For prices, see special price-list.

You will recall that we purchased our Marquis Seed Wheat from you last spring; it yielded 35 bushels per acre, notwithstanding the unfavorable season.—J. S. HATHORN, Mgr. Rose Hill Farm, Geneva, N. Y., Nov. 10, 1920.

The Spring Wheat seed we ordered of your house came all right, and is entirely satisfactory. We pay more here for inferior seed. The mills claim it is northern grown but it looks like a local product recleaned; it does not stand comparison with yours at all, and, what is more, they charge us for bags.—CHARLES L. VOLLMER, Port Clinton, Ohio.

We sowed the Marquis Spring Wheat the last of April; yield, 37 bushels per acre; good plump berries.—FLOYD LDEWELLER, Middlesex, N. Y.

KEAN & SON, Stanley, N. Y., report a yield of 40 bushels Spring Wheat from exactly 10 acres, crop of 1918. A variety of Winter Wheat raised on the same farm yielded 34 bushels per acre.

The 1 acre produced 30 bushels of nice, plump Wheat.—FRANK HITCHCOCK, Canaan, Conn.

Dibble's Seed Barley
Oderbrucker
A new, six-rowed Barley from Wisconsin, our best Barley state. Disseminated by the Wisconsin Experiment Station, and pronounced the best Barley ever sent out by the Wisconsin Station. Samples free. For prices, see special price-list.

The barley went 75 bushels to the acre, and the corn was the best ground here this fall.—A. A. BOATFIELD, Cazenovia, N. Y., Oct. 15.

The Barley yield was good—about 45 bushels to acre.—MURRAY J. FISHER, Madrid, N. Y., Nov. 16.

Dibble's Canadian Six-rowed Barley
The earliest variety grown, maturing in from 65 to 75 days. We have been growing Canadian Six-rowed Barley on the Dibble Farms for over a score of years. It has made yields of as high as 57 bushels per acre on fields of from 20 to 40 acres, with average yields of from 40 to 54 bushels for twenty years. Recently, on our Seed Farms, we had 106 acres that produced a yield on different fields varying from 42 to 60 bushels per acre. The Barley crop was below normal last year, due to various reasons, but higher than the crop of the past two years. In spite of the wet weather at harvest, we obtained a few thousand bushels of good quality. Samples free. For prices, see special price-list.
Dibble’s Northern-Grown Seed Corn for Northern Farmers

Every bag is tagged, showing our purity and germination tests. Every lot tested in our own laboratory for purity, moisture content, and germination, and sold subject to our famous money-back-if-you-want-it guarantee.

The utmost care is taken to furnish Seed Corn of the highest possible quality, Corn that is thoroughly dry, of high germination and of varieties that are adapted to the northern and eastern states.

Northern-grown Corn is the only kind to plant in the northern states. It is vigorous, hardy, acclimated, and productive. Southern-grown varieties look nice, germinate well, but do not mature.

Dibble’s Seed Corn Guarantee

We guarantee every bushel of our Seed Corn to be northern-grown and thoroughly recleaned. Our germination tests usually show 90 per cent, or above, and we sell Seed Corn subject to your test.

You may keep our Seed Corn ten days, test it any way you wish, and if it does not “make good,” return it immediately and we will refund your money, paying the freight both ways, or refill your order. We use reasonable care in packing and sending out our Seed Corn, but as so many circumstances may arise over which we have no control, we do not guarantee, nor will we be responsible for, the crop grown from any of our seeds.

HUNDREDS OF PEOPLE ASK US ANNUALLY

Where is Honeoye Falls?” Look at the map. If you are within or just outside of the 300-mile circle, you should be our customer.
Dibble’s Mammoth Yellow Flint Corn

Is the best Flint Corn in cultivation either for crop or silo. It is not only the largest-growing Flint variety, but also one of the earliest, maturing here in the Genesee Valley in around 100 days. The stalks average 8 to 10 feet in height, under good cultivation sometimes 12 to 14 feet, from 1 to 3 feet taller than other Flint varieties we have grown alongside. The stalks leaf profusely nearly to the ground, and the stalks and leaves are sweet, making this variety most desirable for ensilage, for those sections of our country known as “Flint Corn Land.”

As a cropper for husking, Dibble’s Mammoth Yellow Flint is unexcelled. The ears average 10 to 15 inches in length, and frequently there are two or three mammoth ears to a stalk.

Our stock seed consisted of several bushels, every ear of which was over 12 inches long, and many of them exceeded 15 inches.

Dibble’s Mammoth Yellow Flint is, without doubt, the most productive Flint Corn known. Crop exceedingly good this year; almost perfect in quality and in good supply.

Germination of Mammoth Yellow Flint got of you last spring was 97 per cent. Have used it for eight years and would not plant any other for husking. It is far ahead of other Corn in every way.—CLARENCE J. SHANNON, Starkey, N. Y., Oct. 29.

We have just finished husking a 2-acre lot of Corn raised from your Mammoth Yellow Flint Seed Corn, and the yield has been so good that I cannot keep it to myself. We put into our crib out of this 2-acre lot 400 bushels of very fine Corn.—H. A. MEDLONG, Oswego Co., N. Y.

Every bag tagged, showing our purity and germination tests. Samples Free. For prices, see special price-list in Catalog

From the peck of Mammoth Yellow Flint Corn we produced 243 bushels.—ORA D. BLANCHARD, Sullivan Co., N. H.

I planted a little over one-half bushel of the Corn, and will have about 400 bushels. I am much pleased.—K. A. BEACH, New Haven Co., Conn.

My crop of Mammoth Yellow Flint Corn was simply splendid; it grew 12 to 14 feet in height, and the ears were from 10 to 18 inches in length.

—WILLIAM H. KNOX, Strafford Co., N. H.

“When the corn is in the shock”
Hall's Gold Nugget Flint Corn

A mighty good yellow Flint, with the largest kernels of any Flint Corn grown. The ears are from 9 to 12 inches long, with kernels that are simply immense, usually averaging twice the size of those of ordinary Flint Corn. Owing to the mammoth size of the grain, the ears, although carrying eight rows to the cob, are twice as large around as common eight-rowed Corn, and two ears are often produced on a stalk. The Gold Nugget is not an extra-early Flint, yet experience has proven that in normal seasons it matures in all parts of New York and New England except in the extreme northern sections and at high altitudes where only the extra-early kinds may make a crop. The stalks grow 7 to 8 feet in height and are well covered with leaves. The fodder is of excellent quality and is largely used for ensilage as well as for husking crop. The introducer reports a crop of 1,740 bushels of ears on six acres on his own farm. A customer of this same firm, writing from Connecticut, reports "over a thousand bushels from 5 1/2 acres," one from Venango County, Pa., "850 bushels from a bushel of seed;" an Onondaga County, N. Y., farmer, "1,206 bushels of ears from 5 1/2 acres;" a Hartford County, Conn., man, "a record yield for Hartford County—97 bushels of shelled Corn per acre from Gold Nugget;" and one of our Livingston County farmers, right here at home, raised 242 heaping bushels of ears on 1 3/4 acres. We do not question the truth of these testimonials in the least, and we have had many letters from our own customers speaking of Gold Nugget in the highest terms. This is our fourth year of offering this variety, and we have the product of a large acreage available, several thousand bushels grown especially for seed purposes. This seed is of a most superior quality and we are sure it will please our most particular customers. Every bag tagged, showing our purity and germination tests.

The Gold Nugget and Luce's Favorite averaged 7 to 8 feet tall, ripened with us and were much better than other varieties in our section.—HAROLD EUTRIS, Rensselaer Falls, N. Y., Oct. 18, 1919.

Samples free. For prices, see special price-list.

Luce's Favorite

A semi-Dent, a Corn between a Flint and Dent, but resembling Flint Corn in habits of growth. The ear is not less than 9 to 12 inches in length, with eight rows of kernels of light yellow color, and bearing some Dent as a rule, though not so deeply dented as Dent Corn. The stalk is of vigorous growth, but not coarse, with a very large amount of leaf extending all the way from the ground to the tip.

Prof. John H. Barron, of the New York State College of Agriculture, states in a recent paper: "During the past three seasons, several of the Farm Bureaus in the dairy counties of the state, in cooperation with the Department of Farm Crops of the College of Agriculture, have been making tests of various Corn varieties for silage. Several varieties of Corn have shown up well, but Luce's Favorite has shown up well more times than any other."

Luce's Favorite, which we grew for ensilage, averaged 12 feet in height and in 112 days produced 25 tons per acre of Corn far superior to other varieties.—THORNLEIF BANK FARMS, Glen Spey, N. Y., Oct. 17.

We have had several thousand bushels of headquarter stock, grown especially for us, that is extremely choice. Every bushel of this variety was grown in sections where the crops were thoroughly matured, properly cured, husked, and stored.

Every bag tagged, showing our purity and germination tests.

Samples free. For prices, see special price-list.
Dibble’s Improved Early Learning Corn

The popular variety for ensilage purposes for the middle and eastern states. Our Improved Learning matures here in western New York in from 100 to 110 days of good corn weather; the stalks average from 10 to 15 feet in height, and we have put into our silos many a time, thirty tons of ensilage per acre that would have husked 100 to 125 bushels of ears.

A customer writing from Barker, N. Y., states: “Filled a silo, 28 x 14 feet from seven acres. Lots of the stalks had two ears on, and would easily have husked 125 to 150 bushels per acre.”

One of the professors of Cornell University, in a letter to us says: “The farmers of the state are making a great mistake in resorting to such varieties as Eureka and Southern Horse-Tooth for Ensilage Corn,” and he recommends Learning as one of the best varieties to plant. This has been our contention for at least ten years. We found it out by comparative tests in field culture on our own seed farms, and it is a source of pleasure to us to have Cornell University advocate the very doctrine we have been trying to impress on the farmers of this state for the past decade. Dibble’s Improved Learning is strictly high-grade, pedigree seed, from carefully selected, hand-picked ears, and sold to you subject to your own test. Keep it ten days, and, if not right, return it and get your money back as per terms of our guarantee. You run absolutely no chance of using poor Seed Corn if you buy Dibble’s Improved Early Learning. We shall be glad to send you samples free; so test them to your entire satisfaction. For prices, see special price-list.

From an Enthusiastic Grower

The Improved Learning grew very large and well eared. Am sending photographs. The Corn stood 12 to 13 feet in height. The ears of Corn shown in the small photograph are fully 8 feet from the ground.—Wm. P. Brooks, Allegany Co., N. Y.
Dibble's Improved Early Learning Corn

Ten days earlier than the standard Learning of the western states, and probably the most popular variety for ensilage in the East.

The germination of the Learning was 100 per cent; average height of stalks 15 feet; and the crop was the very best grown in this vicinity.—EDWARD L. LORANG, North Java, N. Y.

The Learning Corn was exceptionally good; grew 15 to 16 feet high, with many stalks having four ears. Six acres filled a 100-ton silo.—F. L. PAMELEE, Putney, Windham Co., Vt.

We want to tell you that we have had the biggest crop that we ever had and the finest looking Corn we ever saw. Not only are the stalks very long, but very large, many having three ears on them, and they were very large ones, too. For the first time since we have owned a silo—about five years—we have had more Corn than the silo would hold.—CHAS. NELSON DODGE, 225 Central Park West, New York City.

(Mr. Dodge used the Improved Learning.)

I had good results from the Learning Corn. I filled a 12 x 26-foot silo from 5 acres. Corn grew 10 to 12 feet high.—ERNEST POSER, Bethel, Conn.

Had the Learning alongside of Eureka (not your seed), it gave nearly as much fodder per acre as the Eureka, and had many fully matured ears, while the Eureka kernels were barely formed.—K. H. BORLAND, Cape Vincent, N. Y.

The Improved Learning produced 15 to 16 tons, planted in hills; germination 95 per cent, height of stalks 10 to 11 feet. It yielded more per acre than any other variety.—JOHN YOUNGS, Schoharie, N. Y., Oct. 16.

Best Corn in this Section

The Learning Corn obtained from you planted 12 1/2 acres, and from the field we filled two silos, each 14 feet in diameter by 33 feet in height; ensilage was cut to 3/4-inch in length and well trod. It was the best field of Corn in this section. The germination test was 98 per cent.—J. H. GODFREY, Trumansburg, N. Y.

The Improved Learning germinated 90 per cent or better, grew 9 to 12 feet high in 110 days, and the growth was larger than other varieties on the same and adjoining farms.—A. W. MOURSE, Fillmore, N. Y., Oct. 28.

Germination of your Seed Corn was 95 per cent or better; the growth was as heavy as I could cut with a harvester.—J. C. MOORE, Shoreham, Vt.

Early Learning Fine for Ensilage

We have just finished harvesting one of the largest ensilage crops ever grown on this farm. We put up 606 tons. For this section, climate and soil, we know of no other variety that is equal to the Early Learning for ensilage.—G. L. WEAVER, Steward State Institution for Feeble-Minded, Polk, Venango Co., Pa.

The Learning and Early Yellow Dent had splendid germination, grew about 12 feet tall, and we filled our 14 x 24-foot silo from 3 acres; much better than any other variety I saw this season.—A. E. YOUNG, Cobleskill, N. Y.

The Improved Learning planted June 5, harvested Oct. 10, had 85 per cent ripened Corn, grew 10 to 13 feet high, larger and better yield than other varieties.—GEORGE L. KING, West Hickory, Pa.

The Improved Learning yielded 20 tons to the acre. It was planted June 1, harvested September 10; germination 98 per cent; best of any around here.—PETER NELSON, Frankfort, N. Y.

The Improved Learning grown for ensilage in 100 days was far ahead of all other varieties.—C. J. LAWRENCE, Akron, N. Y., Oct. 16.

I had an excellent crop of Corn from your seed. Each stalk had from one to three large well-filled ears; had enough to fill my silo, 14 x 26 feet, and refill it, and sold a neighbor 10 tons from four acres. Germination averaged 99 per cent from all Corn bought from you this year.—R. B. FRASER, Ferndale, N. Y.
Dibble’s Mammoth White Dent Corn

Grows the tallest and is the most leafy of any of the big varieties of Ensilage Corn with which we are acquainted, and is the only big, late, rank-growing White Corn that is, in our opinion, adapted to the northern states.

Our seed stock of this variety is grown in latitude 41°, and during the past seven years it has thoroughly matured and ripened slightly farther north. Northern-grown Seed Corn is the kind for farmers in the northern states to plant.

Dibble’s Mammoth White Dent is the largest, strongest-growing White Corn, whether Flint or Dent, that is adapted to the northern or central states. This variety is a very hardy, extremely rapid grower and, under favorable conditions, with first-class culture, will produce crops 14 to 20 feet in height.

There may be some other varieties of White Corn that will grow as big foliage as our Mammoth White in the North, but on our own farms, and under our own observation, there has been no other kind to compare with it; and this has been the experience of scores of our customers in many states. Farmers from such extreme northern states as New Hampshire and Vermont, and from New York, Massachusetts, Connecticut, Pennsylvania and New Jersey, have written us that Dibble’s Mammoth White is the best Ensilage Corn they ever grew, and many have also said it was well eared. A Connecticut farmer calls it “King of Ensilage Corn.”

On the opposite page, several of our customers state that this Corn grew 18 to 22 feet in height, and others say that four to six acres fill the ordinary silo. Read all the letters.

It has been our experience that southern-grown Corn that has in its natural climate a five- or six-months’ growing season does not produce ears under northern conditions, nothing but stalks, and slushy, watery stalks at that. Now then, you northern and eastern farmers, desiring to grow bumper crops of big Corn with ears on it for your silo, plant Dibble’s Mammoth White Dent instead of Southern Sheep-Tooth, Eureka, Red-Cob and the like, all Corns of southern origin, and you will be more than satisfied. Then drive your cattle to the creek for water instead of giving it to them in their ensilage.

Dibble’s Mammoth White Dent is sold to you subject to your own tests after you receive the Corn. Test it any way, and, if it is not as good as we say it is, send it back and get your money back. Read the guarantee before ordering. Our Corn must please you, or you do not have to keep it.

Samples free. For prices, see special price-list.
Mammoth White Dent Corn

The King of Ensilage Corn. This is the big White Corn that grows the mammoth stalks, with ears on them. The rankest-growing white Corn of northern origin adapted to the northern and eastern states.

We purchased some Mammoth White Dent Corn from you this year and planted it on three acres of land. The crop more than filled a 10- by 20-foot silo and was very much better than any of the ensilage varieties grown on adjoining farms.

After 100 day's growth, the Red Dent and Drought Proof Yellow Dent Corn that we bought from you this year thoroughly ripened and was much better than any other variety we have ever grown or that has been grown on any of our neighbors' farms.—Orville H. Hall, Fultonville, N. Y., Nov. 8, 1920.

Early Yellow Dent Corn purchased of you germinated practically 100 per cent, produced over 20 tons of ensilage per acre, and ripened in 90 days.—Walter H. Barrows, Brownsville, Vt., Nov. 8, 1920.

We received the Improved Leaming and White Cap Ensilage Corn from you in good condition and it seems as though every kernel grew, the corn ripened in a little less than 110 days.—W. W. Spring, Farmdale, Ohio, Nov. 2, 1920.

Germination Over 95 Per Cent

From the Mammoth White Dent, I had the best field of Corn in town; germination was 95 to 100 per cent, height of stalks was 13 feet on the average.

The Mammoth White was much better than any other kind grown, germination test 96 per cent; average height of stalks, 12 feet.—R. L. Petty, Randolph, Vt.

The germination was good; filled two 10 x 30-foot silos from 10 acres; planted Mammoth White and Improved Leaming mixed.—C. R. Kennedy, Geauga Lake, Ohio.

We used the Mammoth White Ensilage and Mammoth Yellow Flint for ensilage. Germination was 96 per cent and produced the best crop of silage we have had in five years.—E. R. Leindorf, Rogers, Mich.

The germination of the Mammoth White Ensilage Corn was good and it yielded 25 tons ensilage per acre.—F. S. Sprinkle, Waynesboro, Pa.

The Dibble's Mammoth White Dent which we planted for ensilage all came up. Stalks were over 12 feet high, and from 4 acres we filled a large silo. Sown June 1, the corn ripened, and it was better than anywhere around here.—L. J. Miller, Athens, Pa.

Stalks 18 Feet High

The Corn grew uncommonly good—as high as 18 feet. I grew fifty loads from 2 acres of ground.—C. G. Weeks, King Hill Stock Farm, Surprise, N. Y.

The Mammoth White Corn is satisfactory in every way. Everyone who sees it says it is the largest they ever saw.—Henry W. Hathaway, New Bedford, Mass.

May 24 I planted 1 acre of your Mammoth White Ensilage Corn for fall fodder, and fed my herd of twenty cattle August 15 for two months. It is the biggest, leafiest, most palatable Corn I have ever grown.—A. D. Bittner, Beaver Meadows, Pa.

Gave First-Class Crop

The Mammoth White Ensilage Corn gave me a first-class growth; averaged 14 feet tall; had enough on less than 4 acres to fill a silo, 14 x 26 feet, and had six or eight loads left that we could not put in.—Geo. L. Record, Earlville, N. Y.

The Mammoth White Dent averaged 14 feet in height in only 90 days of growth. It was 4 feet higher than other varieties and produced 4 tons per acre more.—Lewis J. Budee, Walton, N. Y.

Averaged Two Ears to a Stalk

I raised a large crop of Corn this year with your Mammoth White Dent, the largest I ever grew; ears measured 12 1/2 inches long, 11 3/4 inches in circumference, and two ears on a stalk. I filled a 16 x 12-foot silo from 7 acres and husked 300 bushels Corn.—F. J. Schurr, Mount, Pa.

The White Corn was a large crop. The 5 acres filled a silo, 15 x 24 feet, and refilled it, and there are many tons still in the lot. The best piece around here.—F. A. Callahan, Cazenovia, N. Y.

The Mammoth White Dent grew 10 to 14 feet tall; best crop in this section.—M. B. Randall, Oriskany Falls, N. Y.
Some splendid specimens of Dibble's Early Yellow Dent Corn

Dibble's Early Yellow Dent Corn

Was introduced by us fourteen years ago, as the earliest large Yellow Dent in existence. During that time we have tried out, tested and inspected fields of other Early Dents and, as a result, we still say to our customers that Dibble's Early Yellow Dent is the most desirable of the Early Dents for the eastern farmer.

A Dakota seedhouse offers a Dent that ripens in 70 days, but the stalks are 4 to 5 feet high, and the ears are nubbins, 4 to 5 inches long. Minnesota, Wisconsin, Iowa and Ohio firms offer early Dents to mature in 75 to 80 days, but the stalks are 5 to 7 feet high, and the ears 5 to 7 inches long. We can procure stocks of these for you if you wish, but why bother with dwarf varieties of Corn when you can grow magnificent crops of Dibble's Early Yellow Dent on the same land? We do not advise its growth at high altitudes, such as the hill lands of New York, for a husking crop, but we do recommend it as the best early Yellow Dent for ensilage now grown. Dibble's Early Yellow Dent planted here in the Genesee Valley country, May 15 to June 1, is usually ready for the harvest by early September, but many of our customers report that it matures earlier with them. The foliage is very leafy and the stalks average 10 to 12 feet in height. One field of twelve acres on one of our own farms measured 14 feet on the level for the entire field. The ears, 8 to 10 inches in length, are closely set with bright yellow grains on a small cob, as shown in illustration. Hundreds of our customers, in a dozen different states, plant Dibble's Early Yellow Dent year after year. Our seed is from carefully selected, hand-picked ears, thoroughly re-cleaned, of splendid germination, and we sell it subject to your test on our money-back-if-you-want-it guarantee. Samples free. For prices, see special price-list.

Dibble's White-Cap Yellow Dent

An extra-early Dent variety with smaller stalks and ears than the Early Yellow. Desirable for a husking crop in the northern states where the seasons are short, and a mighty good kind for ensilage in the hill country, or on soil that is not naturally Corn land. Samples free. For prices, see special price-list.
Dibble’s Early Yellow Dent

The ideal ensilage Corn for the extreme northern states where the seasons are short and the frost comes early. Read these testimonials, every one from the cold northern states on the Canadian border.

Early Yellow Dent, planted May 29 to 30, averaged 12 to 13½ feet in height, and ears are almost ripe September 20; over 22 tons to the acre, with not much fertilizer.—Rev. Fr. WILFRED, O. S. B., St. Anselm’s College, Manchester, N. H.

I have used your Seed Corn for three years and consider it the best ever. This year planted Early Yellow Dent; germination in test was 100 per cent and in field about the same; well-matured ears on nearly every stalk.—C. L. BEECHER, Watertown, N. Y.

The Early Yellow Dent was of good germination and made a splendid growth in three months—stalks 12 to 13 feet high.—Eugene W. GEROW, Grand Blanc, Mich., Oct. 26.

The germination of the Early Yellow Dent was perfect; yield per acre 15 to 16 tons; well eared, with two ears on a good many stalks; 10 to 12 feet high; planted May 25; ripe enough to husk before frost.—E. E. Eastman, Ellisburg, N. Y.

The Early Yellow Dent showed a germination of 100 per cent, grew 12 to 14 feet high and made prime ensilage—best ensilage Corn in the neighborhood.—F. W. Harris, Whitehall, N. Y.

Largest Crop Ever Harvested

We have the largest crop of silage corn from your seed we ever harvested. The new seedings are looking fine and one field is the best on record.—W. S. REED, Little Falls, N. Y., Oct. 14.

The Early Yellow Dent was very good; stalks over 12 feet and two ears of Corn to a stalk.—John W. FREY, Narrowsburg, N. Y.

The Seed Corn grew to an average of 12 feet in height in one of the worst droughts this region ever had. I estimate the yield 23 to 24 tons to the acre; it is well adapted to this section.—Paul W. Goodsoe, Stratham, N. H.

Two bushels of the Early Yellow Dent Corn filled my silo, 12 x 32 feet.—Charles Johnson, Millerton, N. Y.

Yielded Twenty-five Tons per Acre

As to the Early Dent Seed Corn, would say the germination was first-class and gave us a yield of 25 tons ensilage per acre this year.—Chas. Bradbury, Middleville, N. Y., Nov. 22.

The Early Yellow Dent grown for husking crop and ensilage had good germination; stalks averaged 9 feet in height. It ripened much better than most other varieties of Corn this year.—Nels Erickson, Shelton, Conn., Oct. 20.

Dibble’s Early Yellow Dent produced 18 tons per acre; Corn thoroughly ripened; height of stalks was 12 feet; and germination 97 per cent.—Samuel Moshier, Castorland, N. Y.

The Early Yellow Dent grew 8 to 10 feet high and yielded over 100 bushels per acre—better than any other variety in this section.—H. E. Hayes, Windber, Pa.
Edward Dibble's Big Red Dent

Is a Corn of great value and well worthy of trial by our customers. We found this Corn in northern Ohio several years ago, and, in comparison with Improved Earthing on adjoining farms, it has larger and more vigorous stalks. It not only grew more and bigger foliage than the Earthing, with bigger ears and more of them, but it was also earlier. Experience on our farms has given the same results, and a number of the leading dairymen in our section, after three years' experience, consider it the best ensilage Corn for western New York. There have been raised at least 100 acres of it in our town that would have husked 125 to 150 bushels of sound, dry Corn to the acre if it had not been put into the silos. A number of our customers who planted it in a small way last season had most satisfactory crops and will plant heavily of it this year.

Dibble's Big Red Dent grows tall and vigorous, with leafy stalks, and is a remarkable producer. The kernels when thoroughly dry are of a beautiful reddish tint, well set on a small, red cob. Recommended for trial in all sections where Improved Earthing gives good results.

Every bag tagged, showing our purity and germination tests. For prices, see special price-list. Samples free.

I raised the Big Red Dent for ensilage. It is the best Corn I ever saw; planted May 17, ripened September 18.—FRANK HOPKINS, Hawleyville, Conn.

Seed purchased of you is very satisfactory. Your Big Red Dent is the tallest Corn in our county.—W. D. FIELD, Shelburne Falls, Mass.

The Big Red Dent surely deserves its name; came out fine. Put part in the silo and will husk balance. It makes very rich feed for silo.—EMIL ELIKAN, Bellaire, Ohio.

Dibble's Big Red Dent showed a germination test with us of 100 per cent; planted June 6 and harvested September 20. The Corn ripened and was very good indeed.—L. D. LULL, Westfield, N. Y., Oct. 20.

The Red Dent Corn, which was grown for ensilage, produced a yield of 2 tons per acre this season.—D. W. MORRIS & SON, West Winfield, N. Y.

The Red Dent Corn was of splendid germination and yielded 800 bushels on five acres, the biggest crop I ever grew.—CHAS. CAMERON, Madison, N. Y.

I am sorry that I did not have all Red Dent Corn as it was the best of any I ever had.—ERNEST B. MEAD, Locke, N. Y.

I could not plant the Big Red Dent until the 23d of June, but had more silage than most of my neighbors.—FLOYD LOWDEN, Hilton, N. Y.

Your Big Red had perfect germination, eared heavily, and grew from 10 to 13 feet high.—L. L. BECKWITH, Ludlowville, N. Y.
New Drought-Proof Yellow Dent

Originated in northwestern Ohio. Its remarkably well-developed root-system enables it to withstand dry weather better than any other variety of Ensilage Corn adapted to northern conditions. This, together with its great yielding power, prompted us to introduce it, some five years ago, to our customers, many of whom report it to be the best ensilage variety they ever grew. With good Corn weather, it matures in 110 to 120 days, producing well-shaped ears of good size, with large, uniformly shaped kernels set closely together on a noticeably small red cob.

Note the border on page 15, which is a life-like photographic reproduction of the kernels as they actually are.

Samples free. For prices see special money-saving price-list in this catalog, and order early, as our stock of this variety is limited.
Dibble’s Seed Potatoes

Northern-grown from selected stock seed, planted on soils especially adapted to each variety, produce a quality that for vigor, purity and productiveness is unexcelled.

For nearly a third of a century the sales of Dibble’s Seed Potatoes have gradually increased until the average annual sales are around 100,000 bushels, and we do not have a single salesman on the road, every order coming to us through the mail, and at least four-fifths of our business from old customers, thousands of whom plant Dibble’s Seed Potatoes annually.

We grow on our own farms and in this section varieties adapted to our soils, and as to the earlies, we have them grown for us on contract in the virgin soils of regions still farther north, where these early types grow larger and better tubers than can be obtained on the old lands of the eastern states.

Seed Potatoes that are northern-grown, moved south only from 100 to 300 miles, frequently produce double the crop of home-grown seed, even of the same variety.

We Are Headquarters for Seed Potatoes

We offer "the best 15 varieties," a list approved by Dr. William Stuart, of the United States Department of Agriculture, whom we consider the greatest living authority on Potatoes. We have good crops of most varieties this year, both early and late, with the exception of two or three kinds, which are relatively in short supply. Notwithstanding that this year's Potato crop is the largest one on record in years, you cannot expect to obtain your full seed requirements unless you order early, or better yet, at once.

Seed Potato Guarantee. We guarantee our Seed Potatoes northern-grown, assorted for seed purposes, a strictly first-class sample U. S. Grade No. 1 as to quality. While we exercise great care to have our Seed Potatoes pure and reliable, so many circumstances may arise over which we have no control that we do not give any warranty, express or implied, nor will we be responsible for the crops grown therefrom. Customers are to examine their Seed Potatoes at once on arrival, as they are perishable goods, and, if not entirely satisfactory, advise us at once; otherwise it is mutually agreed between the buyer and seller that they are satisfactory.

The photograph below, taken last season, is an average Potato field on the Dibble Seed Farms.

Dibble’s Potatoes—foliage green until killed by frost
The “Best Six” Early Varieties of Potatoes Adapted to the Northern and Eastern States

**Early Ohio, Pedigree Stock**

For first early or extra early, either for the family garden or for market, there is nothing to compare with the Early Ohio. The Early Ohio is round to oblong in shape, pink skin, white flesh of most excellent quality and extra early.

**Dibble’s Early Manistee**

The Manistee is a seedling of the Rose, round to oblong in shape, slightly flattened, skin light pink, eyes near the surface, flesh pure white and table quality that is hard to beat. The Manistee gives best results on light, sandy soil.

The Manistee Potatoes yielded at the rate of 300 bushels per acre.—A. P. Noble, Gillett, Pa., Nov. 3.

**Early Rose**

The genuine improved Early Rose. We have the genuine stock of this variety, grown on virgin soil.

The Early Rose I had from you were very satisfactory in every respect; no blight or disease of any kind, and yielded about 200 bushels to the acre.—G. E. Reed, Putnam Co., N. Y.

While the crops of all kinds of Potatoes are exceedingly large, early Potatoes of high quality and freedom from disease are almost impossible to procure at any price.

For prices, see special price-list in this catalog.
Dibble's Russet Potatoes

**The best for main crop now in cultivation.** Were introduced to our customers several years ago. The first season we had just 1,000 barrels to offer, and they gave such good satisfaction that year that the next season we sold 4,160 barrels; the results were so remarkable that the following season our sales exceeded 11,000 barrels. There was never a new variety introduced that made a name for itself so quickly. The Russet is our best main-crop variety in western New York. It is grown extensively in Michigan, and, at the great Maine Potato Show one of our customers reported: "Dibble's Russets grown from your seed won First Prize and Sweepstakes."

The vines are strikingly distinct; rich, dark green in color; very robust and luxuriant in their habit of growth, completely covering the ground at the height of their development; extremely disease-resistant; in fact, hundreds of our customers have written us that, with them, Dibble's Russets were blight-proof. The tubers are round to oblong in shape, of good size, with pure white flesh, and covered with a russet skin; few and shallow eyes, and a quality either baked or boiled that cannot be excelled; they are an excellent market variety. Dibble's Russet is enormously productive, as the tubers are as large as those of the Carman family, such as Rurals, Carmans, Raleighs and the like; but where these varieties set only three to six tubers to the hill, with us, under identical soil and cultural conditions, the Russet produces six, eight, ten, or even twelve tubers to the hill. As the Russets have few eyes, plenty of seed should be used, so that the tubers do not grow too large. Note typical tubers painted from nature on this page.

On our own farms the Russet is the best Potato we have ever grown. Many of our customers have written us that it has outyielded other sorts two to one, and yields of 300 to 400 bushels per acre are not uncommon. During the six years we have been distributing Dibble's Russets, we have received thousands of letters from our customers about them, and ninety-nine out of every hundred at least write of their wonderful qualities in the highest terms. Judging from the letters we have received, the Russets give splendid results in almost any soil or climate, and in those sections of Michigan, Ohio, Pennsylvania, New Jersey, eastern New York, and throughout the New England and various other states where it has been introduced, the Russet is today the most popular as to quality and freedom from disease. It is much more productive than any other variety grown, and the Russets give splendid yields when other kinds fail" is a tribute we frequently receive for this grand Potato.

In many sections of Pennsylvania and Massachusetts, last year, the Potato crop was almost a complete failure, but there were any number of crops of Dibble's Russets which yielded over 300 bushels per acre. One farm alone produced 12,000 bushels.

**See testimonials confirming this on following pages.**

We have a splendid crop of nice, medium-sized tubers, every bushel of which was saved from fields that were absolutely free from either early or late blight, where the vines grew green till killed by frost.

*For prices, see special price-list*
Dibble’s Russet Potato

Notice the magnificent foliage in the above picture. We have found the Russet the most disease-resistant of any variety, and over a hundred of our customers have written us that Dibble’s Russet was blight-proof while other varieties were blighted and died in the same or adjoining fields.

12,000 Bushels on the State Farm

Under separate cover I am sending you a photograph of a bin (12,000 bushels) of your Russet Potatoes. This year they have been pronounced by all who have seen them to be the finest looking lot of Potatoes they have ever seen. Our total average yield this year was only 250 bushels per acre, but we lost about ten acres that were drowned out with so much rain. This has been a very hard year to grow Potatoes, and but for your Russets we would have had a very poor showing.—Donald Macrae, State Farm, Mass., Nov. 17.

Neither late blight nor bugs interfered with our crop of Dibble’s Russets which yielded over 200 bushels to the acre at the end of three months and were double the yield of any other variety grown on the same farm. —G. M. Espie, Caledonia, N.Y., Nov. 1, 1920.

Dibble’s Russets grown from your seed did not blight and at the end of 90 days produced 250 bushels to the acre.—Gilbert H. Perry, Ransomville, N. Y., Nov. 4, 1920.

Results of production of one hill of Dibble’s Russet Potatoes were twenty Potatoes. The largest weighed 22 ounces; the smallest 3½ ounces; total weight 13 pounds.—E. G. Bates, Springfield, Mass., Oct. 19, 1920.

The Russets did better than any other variety grown this year on my farm or adjoining farms, twenty-five bushels of seed produced 240 bushels marketable Potatoes.—John Bieger, Warrensville, Ohio.

The Dibble’s Russets turned out fine on my farm, 6 to 15 eating Potatoes to a hill. From the two barrels I bought of you, I had 30 barrels; they were free from blight.—Warren Hunt, New Baltimore, N. Y.

Free from Blight

We are immensely pleased with the way Russet Potatoes turned out. They did better than the Green Mountain and Bovee varieties. They resisted the blight which seriously affected Potatoes in many sections of Long Island.—David Gardiner, Babylon, N. Y., Oct. 27.

In my opinion there is not better Potato grown than the Russet. Have grown them four years and during that time they have not been affected with blight.—Elmer J. Dorn, Johnstown, N. Y.

Dibble’s Russet seed was very satisfactory, free from blight and rot when most other Potatoes rotted owing to extra wet season.—W. W. Pratt, Chester, Mass.

The Russet Potatoes were very good; vines green, longer than all other varieties; yield 175 to 200 bushels per acre.—Edward P. Kurtz, Lehighton, Pa.

Highest in Yield

I have a dandy good crop of Dibble’s Russet Potatoes—yield 300 bushels to the acre.—Grove Cottrell, Cory, Pa., Oct. 18.

The Russets I bought of you outyielded all other sorts in size and bushels.—Henry P. Brown, Laurys Station, Pa.

I have been digging my Potatoes. You say altogether too much about the Russets in your catalog—all you need to say is that they are the best Potatoes that can be grown—best lookers, best eaters, best yielders, best in every way. Hills ranged from 7 to 12 tubers—all salable as firsts.—J. R. Lawrence, North Leverett, Mass.
Dibble’s Russet Potatoes

Another year’s experience in growing this best of all Potatoes has merely confirmed our opinion and has piled proof upon proof that the Russet is the best Potato of our time, the best in point of yield, the best in quality and the best in its freedom from disease. On thousands of farms in a score of states, Dibble’s Russet has demonstrated its superiority over all other varieties in actual field tests and we ask you to read the testimonial letters below, giving convincing evidence that the Russet is the Potato to grow on your farm. The following farmers, from half a dozen states, testify that Dibble’s Russets outyielded other sorts two to one.

Dibble’s Russets were thoroughly matured and our crop is over 300 bushels to the acre.—WM. F. PAUSEWANG, Sayville, N. Y., Nov. 8, 1920.

In the Allegany County Potato Variety Tests this year, Dibble’s Russets were one of the two best varieties of Potatoes.—MILTON B. SISSON, Almond, N. Y.

I have raised Dibble’s Russets nine years. This year the yield was 250 bushels per acre.—W. W. CLARKE, New Preston, Conn.

Two years ago, I bought of you five different varieties of Potatoes, gave each variety the same care, and Dibble’s Russets outyielded them all.—AUGUST ROHDE, 30 Belmont St., Rochester, N. Y.

Dibble’s Russets have been a great success with me—no blight; splendid size and wonderful yields. My crop is the best I ever raised.—JOHN BYRON, Danbury, Conn., Oct. 20.

Dibble’s Russets produced 250 bushels per acre—no blight and no rot; large yield; all other varieties unsound.—ALBERT W. LITTLEFIELD, Holliston, Mass.

The Russets were a fine crop and of good size.—FRANK H. MARTIN, Plainfield, N. J.

I planted the Russets by the side of other varieties, and they yielded double what the others did and were free from blights; bugs, and blight.—D. J. SNYDER, Meredith, N. Y.

Russets a good crop; other varieties a failure. Everyone who got seed from us had a good crop. Did not average a bushel of seconds to the 100 bushels of firsts from your seed. O. G. WATT, Export, Pa., Oct. 23.

From the 8 bushels of Seed Potatoes I have 160 bushels of beautiful Potatoes—the best yield in this section, and twice the yield that I had from my own seed.—EDWARD P. LOVE, Peterborough, N. H.

The barrel of Dibble’s Russets I planted this spring yielded three times as many Potatoes as other varieties under same conditions.—GEO. B. NEAFIE, Andover, N. J.

Under the same conditions, the Russet yielded over twice as many as the other kinds.—PHILIP REINER, JR., Wyoming Co., N. Y.

The Russets planted alongside other varieties produced double the yield. Their cooking quality is second to none.—W. R. TOUSEY, Waterport, N. Y., Nov. 12.

For prices, see special price-list in this catalog.
Dibble's Standard White Varieties for Main Crop

Dibble’s Improved Green Mountain

In the Improved Green Mountain we have a better Potato than was the old Green Mountain at its best, a score of years ago.

Several years ago, Edward F. Dibble, of our Corporation, was called upon to act as expert judge at the National Potato Show held at Grand Rapids. The first and sweepstakes prizes were awarded to the handsomest imaginable exhibit of Green Mountains. Every tuber was uniform in shape, oblong, with two good ends, slightly flattened, creamy white skin absolutely free from disease in any form, and with pure white flesh of most excellent quality. These Potatoes were from a county exhibit and the skilled potato-growers of this county were going to grow solely this improved strain of Green Mountains under the direction of the County Farm Bureau Agent. We arranged with the County Agent to handle the product. This season the crop is the choicest lot of Green Mountains we have ever seen. They were grown in one county in the northwestern United States, near Lake Superior, north of the latitude of Ottawa and Montreal, and under the personal direction of the County Agent, who is a Potato expert. To our personal knowledge, the Green Mountains we are offering are strictly true as to type, grown on virgin soil, and from fields that were absolutely free from blight, the green vines completely covering the ground until killed by frost, and the average yield has been from 200 to 300 bushels per acre, without the aid of fertilizers or manure in any form. If Green Mountains have given good results on your farm and you want to raise an old-time crop, try Dibble’s Improved Green Mountains this year, and our word for it, you will not be disappointed.

The Green Mountain and Cobbler Potatoes from your seed yielded 225 bushels per acre, 60 per cent better than other varieties grown on the same and adjoining fields.—Hugh Van Alstyne, Old Chatham, N. Y.

The Improved Green Mountain yielded 240 bushels per acre.—Geo. F. Root, Concord, Mass., Oct. 23.

Our 18 acres of Green Mountain Seed Potatoes purchased from you went through the second state inspection with a perfectly clean bill of health.—Julian A. Dimock, East Corinth, Vt., Oct. 21, 1920.

Cobblers, Green Mountains, Moneymakers, and Russets we received from you last spring—all yielded over 200 bushels to the acre and did not blight at any time during the growing period.—John H. Culver, Plainfield, N. J., Nov. 7, 1920.

Dibble’s Money-Maker

Is the handsomest and most productive long white Potato now in cultivation. The tubers are long and shapely, of splendid quality, and especially desirable as bakers. It is a splendid yielder, holding the world’s record for the largest yield from one pound and from one peck of seed. To those who prefer to grow a long Potato, we recommend Dibble’s Money-Maker as the one to grow.

One barrel of Money-Makers yielded 63 bushels of marketable Potatoes.—Russell Wynkoop, Saugerties, N. Y., Nov. 5, 1920.

The Money-Maker yielded fully 255 bushels per acre and were free from blight.—Fred S. Beecher, Winchester, Conn.
Dibble’s Selected List of Late Varieties
for Main Crop

The following three varieties are of the well-known Carman family, the best-known type of market Potato now in cultivation on American soil.

Rural New Yorker No. 2

The first of the late Mr. Carman’s introductions that proved to be of great value. The Rural New Yorker No. 2 is a late variety, growing vines dark green in color, upright in habit of growth, with purple blossoms. The tubers are round to oblong, unusually large in size, white in color, eyes near the surface, and sets, as a rule, but two to four tubers per plant or hill, but usually all large ones.

Carman No. 3

Also originated by Mr. Carman and introduced by him several years later, as an improvement over the No. 2, which it resembles in every respect, except that it sets more heavily in the hill, averaging, with us, three to five tubers per hill and mostly merchantable.

We had a phenomenal yield of 300 bushels to the acre. They were much better than any other fields on the same or adjoining farms and did not blight at any time during the period of growth.—D. H. McElroy, Monroe, N. Y., Nov. 6, 1920.

Sir Walter Raleigh

The last of the Carman creations and introduced by Peter Henderson & Co. some twenty years ago. The Sir Walter Raleigh is similar to the other two but has, in our opinion, the most desirable quality of setting more tubers per hill and smaller in size, no large or overgrown tubers at all, but of desirable size and shape to command the top price in the best markets.

In many sections, the above have been standard sorts for years, but have run out, and to those farmers desiring fresh stock of these old varieties, we offer around 30,000 bushels from fields that have been absolutely free from blight for three years in succession, although unsprayed with bordeaux—healthy, vigorous, handsome stock, as full of productiveness as when first introduced years ago.

While other varieties of Potatoes on adjoining farms were yielding 150 bushels to the acre, the Carman No. 3 and Raleighs purchased of you gave over 200 bushels to the acre and were free from blight.—Wm. J. Plyter, Newark, N. Y., Nov. 8, 1920.

Gold Coin

Introduced by W. Atlee Burpee & Co. and recommended by them for years as a most desirable variety for main crop. Vines luxuriant, dark green; tubers round to oblong, slightly flattened; creamy light yellowish skin, with flesh of excellent quality.

American Giant

A long, late, rather coarse variety. A good yielder in some sections, but we do not recommend it except where it has proved to be of value. We believe the Moneymaker is the best long white now grown.
IF YOU have read this catalogue carefully, you will have noted we offer nothing but Farm Seeds. We are Farm Seed Specialists and devote our entire time to growing, handling, and selling Farm Seeds only. We believe you should

PLANT DIBLE'S FARM SEEDS

1. Because Dibble's Seeds are better Seeds for less money.
2. Every member of the Dibble Company is a practical farmer, one of them with over a quarter century's experience in Seed-growing.
3. There are over 1,000 acres in the Dibble Seed Farms, comprising some of the choicest farming lands in the far-famed Genesee Valley, and they ship from their Farms to yours.
4. The Warehouses, Elevator and Storage Houses, 400 feet in length, with a capacity of around 100,000 bushels, located on private switches, are owned and paid for. Seed Houses of similar capacity located in our leading cities on the best business streets would rent for at least $50,000 yearly. You save this enormous rental charge in buying direct.
5. The Dibble Farm Seed Business is established in the little village of Honeoye Falls, right in the heart of the best seed-growing district of the Empire State. This means, as nearly as possible, eliminating middlemen, cutting out heavy freight charges, no drayage or cartage expense, and saving you money every time.
6. Dibble's Farm Seeds are tested in our own laboratory by a graduate seed analyst who is a member of our firm, and every bag of Alfalfa, Clover, Timothy, Corn, Oats, Barley, etc., is tagged, showing our purity and germination test, also the month in which the test was made. We were pioneers in giving this service to our customers, long before the state seed laws made it compulsory.
7. In buying Dibble's Farm Seeds, you are assured of getting the highest grade obtainable. Take Alfalfa, Clover and Grass Seed for instance. There are five grades of these seeds, each above 97 per cent purity which will conform to the New York laws. Dibble never buys nor handles but just one quality—the best money will buy.
8. Dibble's Farm Seeds are northern grown, full of vitality, hardy and vigorous, and adapted to the northern and eastern states. We do not handle cheap southern or foreign seeds that are not adapted to our climate. Southern or foreign-grown Alfalfa seed is offered at several dollars less per bushel than we pay for our Northern D. B. Brand, but it will not stand our northern winters. Southern Seed Corn looks nice, grows well, but will not produce ears in our northern states. Hundreds of our customers have written us that Dibble's Northern-grown Seed Potatoes have doubled their crops.
9. Dibble's prices are usually lower than the same quality of seed can be purchased for elsewhere, as we have no overhead expenses, own our own Seed Farms, Warehouses, etc., have no rent to pay, and are satisfied with a just and reasonable profit.
10. In addition to surrounding our customers with every possible protection against poor seeds by buying only the highest grade obtainable and testing every lot in our own Seed Laboratory, we sell Dibble's Farm Seeds on a ten-days' money-back-if-you-want-it guarantee, subject to any test any customer may make or wish to have made within ten days after the seeds come into his possession.

FARM SEEDS, including Potatoes, are cheap this year, for which reason, if for no other, maximum acreages should be planted. The best seeds grow the biggest crops. Dibble's Farm Seeds are the best grade obtainable.

BUY DIRECT—SAVE MONEY
